Title: FOLDING FRAME INCLUDING AROTATABLE HOOK

To: The Commissioner for Patents

P.O. BOX 1450

15

Alexandria, VA 22313-1450

Subject: Information disclosure statement Under
37C.F.R. §1.56.

20 Dear Sir:

25 This is an Information Disclosure Statement in
accordance with the duty to disclose information
material to patentability under 37 CFR §1.56. The
applicants wish to make of record the documents listed
on the accompanying form PTO/SB/08: Taiwanese Patent
TW 426174 (issued on March 11, 2001), Taiwanese Patent
TW 482309 (issued on April 01, 2002).

30

In accordance with MPEP 609 III B(4), information
disclosure statements filed after payment of the issue fee

in an application will not be considered but will merely be placed in the application file. The applicants are not willing to withdraw the application from issue. It is respectfully requested that the cited references merely be placed in
5 the application file and be made of record with the issue of the patent.

The prior art patents contained in the information disclosure statement were mailed from the Taiwan
10 Intellectual Property Office on October 31, 2005 for a counterpart Taiwanese patent application. Applicants sincerely hope that the examiner can consider the items contained in the information disclosure statement.

15 According to the requirement set forth in 37 CFR §1.98 and MPEP 609, the applicants are submitting a copy of the cited Taiwanese Patent TW 426174 (issued on March 11, 2001), Taiwanese Patent TW 482309.

20 A translation of the abstract of the Taiwanese Patent TW 426174 is as follows:

The present invention provides a notebook computer capable of turning a panel. The notebook computer
25 includes a mainframe, a supporting framework, and a monitor. The notebook computer is characterized by the mainframe, the supporting framework, and the monitor. A pivot-jointing part is disposed on the mainframe. A pivot-jointing edge and a jointing device are
30 disposed on the supporting framework. The pivot-jointing edge and the pivot-jointing part of the mainframe engage with each other so that the supporting

framework rotates in a specific angle with respect to the mainframe. A jointing part is disposed in the monitor, and the jointing part engages with the jointing device of the supporting framework. Therefore, the monitor can be turned with respect to the mainframe and placed on the mainframe by a pivoting movement made by the supporting framework with respect to the mainframe.

10 A translation of the abstract of the Taiwanese Patent TW 482309 is as follows:

The present invention provides a fastener. The primary characteristic of the fastener is the change of the fastening way and the fastening direction. Therefore the components of the fastener can be fabricated in a united manner. And the effects of decreasing the amount of components, decreasing the capital of the molds, and the fastener being easily fabricated are reached. Cannelures of small width are disposed at the lateral side of the rear cover of the housing other than cannelures of large width in the present invention. With the cannelures of small width, the fastener can be steadily disposed at the rear cover. It is not only convenient for fabrication but also decreasing the space required for fabrication. And the sizes of products utilizing the fastener are thus decreased.

Respectfully submitted,

Winston Hsu
